

**Secure Locating Technologies, Inc.** is a collaboration of partners with years of experience in the fields of agronomic asset tracking, tank reconditioning, and computer technology. This partnership, with its specialized pool of knowledge, created the SecureTracs tracking systems that provide simplicity, compliance, stewardship and reliability for your business.

**SecureTracs** is a world-class container tracking software. By using barcoding/RFID technology, SecureTracs integrates functionality focused on asset tracking and product traceability. Our software, when used with our scanners, readers and labels, allows real-time online tracking compliant with DOT and EPA certification requirements. SecureTracs provides product solutions for **agriculture, bulk chemical or liquid transport, and container suppliers or reconditioners.**

## Our Plans

All SecureTracs software products have been designed to meet the same standards - reliability, speed, simplicity and cost effectiveness. Finally there is a program that has been designed to meet the needs of your company at a price level you can afford. With a SecureTracs purchase, our representative will work with you to train your personnel and get your system working properly.

All software packages come with the **basic** features including: inventory control, DOT/EPA certification dates, tank origination, basic reporting, and the capability for the administrator to configure users, tank styles and inspection parameters.

The **Premium package** offers the addition of more reports, e-mail alerts, fleet aging, MSDS lookup and individual testing data entry.

Our **Enterprise package** offers custom integration into proprietary recordkeeping systems decreasing or eliminating double entry. This package also comes with customizable reports and tracking modules.

## AgTracs

Tracking systems for EPA Pesticide Containers is effortless with our AgTracs system. SecureTracs understands the agriculture market channels and provides an affordable product that continuously tracks the status of your IBCs or mini-bulk containers, chemical pumps, inventory and other assets.

SecureTracs provides online access to real-time information from the warehouse to the back office. When labels or tags are scanned they transmit data at three to five minutes customizable intervals. SecureTracs combines precise asset location with traditional inventory and resource management, establishing a new standard for critical business information.

- **Define** custom fields for tracking asset data
- **Collect** asset data quickly and easily
- **Track** an unlimited number of assets
- **Import** data on demand or as a scheduled event
- **Export** data to Excel or manage online
- **Specify** parameters to ensure accurate reporting
- **Control** access to asset information and administrative functions online
- **Provides** access to barcode/RFID labels meeting the latest Federal EPA and DOT rulings
